

## SPANISH DICTIONARY

JOHN

## INTRODUCTION

[www.wordmeaning.org](http://www.wordmeaning.org) is an open and collaborative dictionary project that, apart from being able to consult meanings of words, also offers its users the possibility of including new words or nuancing the meaning of existing words in it. As is understandable, this project would be impossible to carry out without the esteemed collaboration of the people who follow us around the world. This e-Book, therefore, was born with the intention of paying a small tribute to all our collaborators.

JOHN has contributed to the dictionary with 4154 meanings that we have approved and collected in this small book. We hope that the reader is very valuable and if you find it useful or want to be part of the project, do not hesitate to visit our website, we will be delighted to receive you.

Working Group

[www.wordmeaning.org](http://www.wordmeaning.org)

## **colilargo**

COLILARGO *Oligoryzomys longicaudatus* is a species of rodent in the Cricetidae family. It lives in Chile and Argentina at less than 2000 meters above sea level, in foothills and near the water. Its name derives from the fact that it measures about 6 cms but its tail measures 11 and 15 cms. It is confused with the parakeet, which is a large mouse, like a small cat. It is of great concern in the southern region of Chile and Argentina, as it is a carrier of HANTAVIRUS and can transmit it through feces to humans, most often with fatal consequences, as immediate antidotes are required to counteract the effects.

## **color del ciervo**

DEER COLOR most of its fur is BEIGE, a light brown.

## **colorante primario**

PRIMARY DYE To study microorganisms, Gram staining is used. Dyes are substances that have the ability to stain cells, structures or tissues. According to their origin, they allow to make microscopic and transparent objects visible, to know their shape and size, as well as their internal and external structures. Crystal violet is the best primary dye for a Gram stain. The color difference is related to the type of bacterial wall: violet-colored cells (Gram-positive wall bacteria) and pink cells (Gram-negative wall bacteria). Safranin is a secondary or contraindication dye that stains bacteria that could not retain the violet-iodine crystal complex.

## **colorante rojo**

RED DYE the most carcinogenic of the additive chemicals in the food industry. In particular red 2 and red 4 are today banned in the United States and several other countries of the world. Decades ago, Maraschino cherries, used in martinis and other cocktails, were no longer sold in warehouses and supermarkets because they were carcinogenic because they were embedded in red dye. The Bacteriological Institute of the Ministry of Health of Chile showed that sodas were more carcinogenic the closer to red were the dyes used. The flavors of strawberry, raspberry, cherry are the most harmful. Avoid them. .
